

SUPPORT BRACKET

Abstract

A support bracket assembly for supporting a hanging item may include at least one first mounting bracket configured to contact a vertically extending object at a first location, and a load supporting member positioned at a horizontal distance around the object and supported by the at least one first mounting bracket. The at least one first mounting bracket may be adjustably or slidably connected to the load supporting member. At least one second mounting bracket may also be provided and may be adjustably connected to the load supporting member and configured to contact the object at a second location.
